## interview warmup

① Background question	1/5
What are you looking for in your next job?	
I am looking for a job were I will be pushed and challenged, where my skills and experience will be put to good	
use and where I can collaborate with other like-minded professionals on projects that achieve positive things f	or
our employer	
① Situational question	2/5
Tell me about a time when you delivered results despite a challenging environment or context. What was the	
situation, what was your goal, and what were the results?	
My toughest challenge is to give a seminar in front of the whole class, and I took it as a challenge. Just have tru	ıst
and confidence in myself, and go with the flow. Glad I did.	
	,
① Technical question	3/5
You request people's phone number. How can you ensure that everyone enters it in the same format?	
Tod Toquest people a priorie number. How our you ensure that everyone enters it in the sume format:	

Regardless of the format entered by users, I can perform backend processing to standardize and store the phone numbers in a consistent format. This can involve removing non-numeric characters, adding country codes or area codes where necessary, or applying a specific format to all stored phone numbers.

## (i) Situational question

4/5

Tell me about a time when you had to develop a new skill. How did you approach the learning process?

I Broke down the skill development process into smaller, manageable tasks or milestones. Allocate dedicated time for learning and practice, and set realistic goals for each stage of the learning process. This helps me in tracking progress and maintaining motivation.

## (i) Background question

5/5

Analysts often craft stories to help their audience better understand data. Can you think of an example? What made the story effective?

Imagine an analyst working for a retail company. They were tasked with presenting sales data for a specific product line to the company's executives. Instead of simply presenting a bunch of numbers and charts, the analyst decided to craft a story around the data to make it more relatable and impactful. The analyst began their presentation by setting the stage and introducing the product line, highlighting its significance and the challenges it had faced in recent months. They painted a picture of the product's journey and its importance to the company's overall success. Next, they shared the data in a narrative format, dividing it into three acts: the rising challenges, the turning point, and the successful outcome. They used visuals, such as line charts and bar graphs, to support their story and provide a visual representation of the data trends. In the rising challenges act, the analyst presented data showing declining sales figures, increasing competition, and customer feedback indicating dissatisfaction with certain product features. This created a sense of urgency and identified the problem that needed to be addressed. In the turning point act, the analyst introduced a new marketing strategy that was implemented to address the challenges. They showed data illustrating the impact of the strategy, such

as increased customer engagement, positive sentiment on social media, and improved customer ratings. Finally, in the successful outcome act, the analyst presented data demonstrating the positive impact of the marketing strategy on sales. They highlighted significant growth percentages, exceeded targets, and positive customer testimonials. The story ended on a high note, emphasizing the successful turnaround of the product line.
